ARIA – ADR-SOC
with AI and ML

A single threat detection solution exceeding the power of seven

A fully automated, AI-driven,
on premise or cloud-based SOC

SIMPLE SOLUTIONS FOR COMPLEX SYSTEMS

ARIA - AI-SOC OPTIONS: CLOUD (PUBLIC OR PRIVATE) OR ON-PREMISE DEPLOYMENT (AIR GAPPED - IF PREFERRED)

Our ARIA CloudADR offers a fully automated, AI-driven, cloud-based virtual SOC, presenting an economical option for businesses needing to secure both on-premises and public cloud infrastructures. This solution can be scaled up to a complete ARIA ADR solution with the addition of a network-attached platform, enhancing detection and mitigation capabilities across all network threats.

Both our cloud and on-premise solutions provide the functionality of seven distinct security and threat intel tools (SIEMs, IDS/IPSs, EDRs, NTAs, UEBAs, and SOARs), enhanced by our more advanced, AI and ML-based threat detection models. This ensures that only confirmed threats are identified and mitigated swiftly, without the need for manual intervention.

CLOUD SOLUTION BENEFITS

A FULL CLOUD THREAT DETECTION AND RESPONSE SOLUTION

Enjoy all the benefits of a cloud-based security solution that is easy to deploy, manage, and use.

EXTENDS TO THE FULL ENTERPRISE

A cloud solution that can protect the entire enterprise: public cloud, on-premises infrastructure, remote devices.

EMPOWER USERS

Any resource in charge of cybersecurity, even IT staff, can operate ARIA CloudADR, and on a part-time basis.

AI AND ML INTELLIGENCE

Take advantage of ML-powered threat models that evolve to detect a wide range of attacks.

GAIN COMPLETE SURFACE COVERAGE

Trust a single solution to monitor firewalls, applications, inter-VM communications, and other potential attack surfaces – all from the cloud.

DETECT THE MOST HARMFUL THREATS

Defend against intrusions, ransomware, DDoS attacks, data exfiltrations, and so much more.

BENEFITS OF ARIA ADR

FIND ALL ATTACKS, FASTER

Verify the threats and attacks that other security tools typically miss. ARIA ADR automatically identifies threats in near real-time while they are still early in the kill chain—before they can inflict significant harm.

TRUE ALERTS

ARIA ADR surfaces only validated, actionable threat alerts. It uses powerful AI capabilities to significantly reduce noise and serve up only validated and actionable threat alerts.

STOP THE MOST DAMAGING ATTACKS, AUTOMATICALLY

ARIA ADR finds and stops ransomware, malware, intrusions, brute force attacks, compromised credentials, insider threats, APTs, exploits, exfiltrations, and DDoS attacks.

PROTECT ANY ENVIRONMENT

ARIA ADR covers all of your environment using a network-attached platform to protect – on-premises systems, IoT devices, and cloud-based systems. It also enforces connectivity policies.

SIMPLIFY OPERATIONS

ARIA ADR can be customized to meet any organization's environment and operated anywhere, even remotely and with as little as a part-time resource with or without cybersecurity expertise.

EFFECTIVE FOUNDATION FOR MDR SERVICES

ARIA ADR provides the ideal platform on which to offer cost-effective managed detection and response services.
